**REPORT
ON POWER FLOWS IN THE TRANSMISSION SYSTEM
IN BOSNIA AND HERZEGOVINA IN 2012**

Sarajevo, February 2013

This Report presents power flows in the transmission system in BiH for 2012. It includes the main review of the power flows and specific indicators and their comparison with the previous year.

Electricity balance in the transmission system

Total available electricity in the transmission system in 2012 was 16.752 GWh. In the transmission system there were totally 12.234 GWh of produced electricity while 38 GWh were injected in the transmission system from the distribution system. From the neighbouring systems it was received 4.481 GWh of electricity.

Out of totally available electricity in the transmission system, distribution companies took over 9.246 GWh, 66 GWh was used for pumping, buyers directly connected to the transmission system took over 2.607 GWh, neighbouring systems were delivered 4.525 GWh, while the transmission losses amounted 308 GWh i.e. 1,84% of totally available electricity in the transmission system.

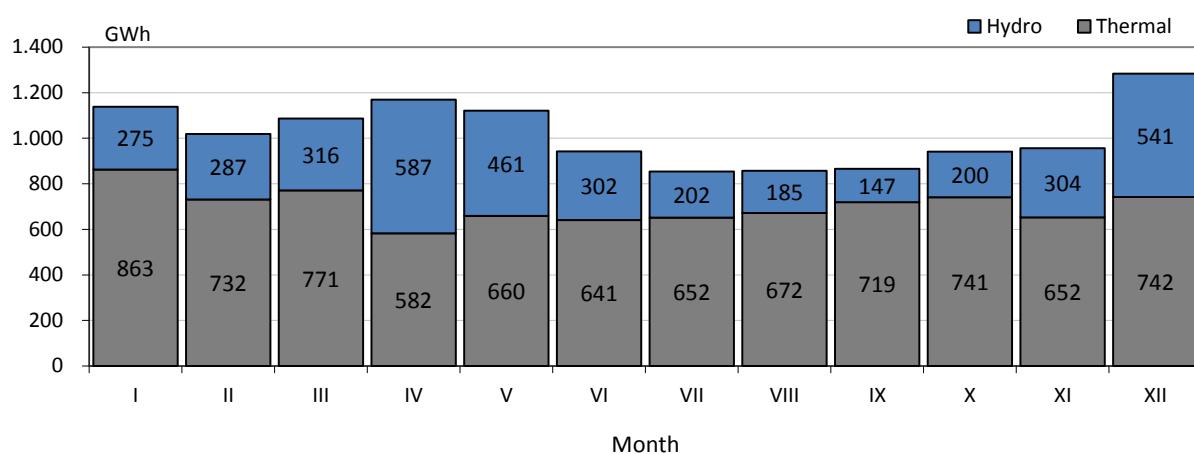

Electricity generation in the transmission system

Out of totally produced 12.234 GWh of electricity in the transmission system in 2012, Hydro Power Plants produced 3.808 GWh, i.e. 31,1% and the Thermal Power Plants produced 8.426 GWh, i.e. 68,9 %. In the process PSHPP Čapljina took over 66 GWh from the transmission system and did that in January and February when this power plant had worked mostly in pumping regime.

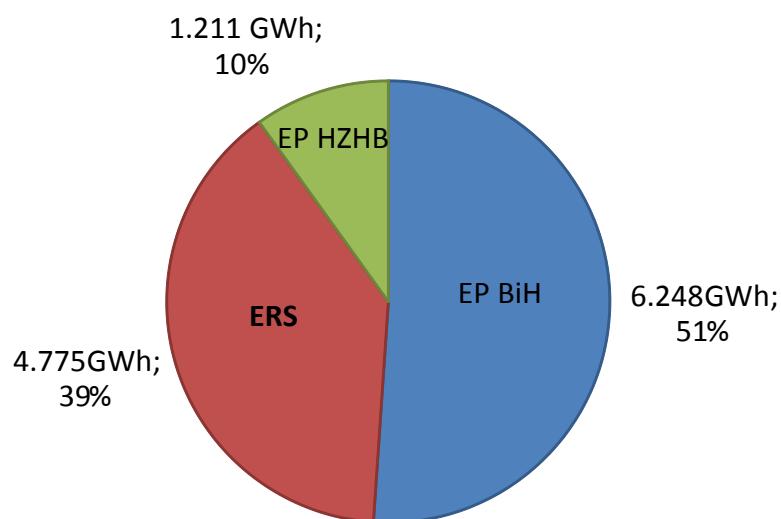

Generally speaking, adverse hydro conditions caused less generation in the Hydro Power Plants in relation to 2011 and specifically to 2010 which, in terms of hydrology, was very convenient year. As a consequence Hydro Power Plants in 2012 produced 88,8 % of electricity generated in 2011. The Thermal Power Plants also produced 10,4% less electricity than in 2011 so that the transmission system in BiH had totally 10,7% less produced electricity than in 2011.

The following diagrams show the structure of electricity generation in the transmission system in BiH presented through months for 2012 year as well as the generation companies' contribution in electricity generation in BiH.

The structure of electricity consumption through the months in 2012

Companies' shares in the electricity

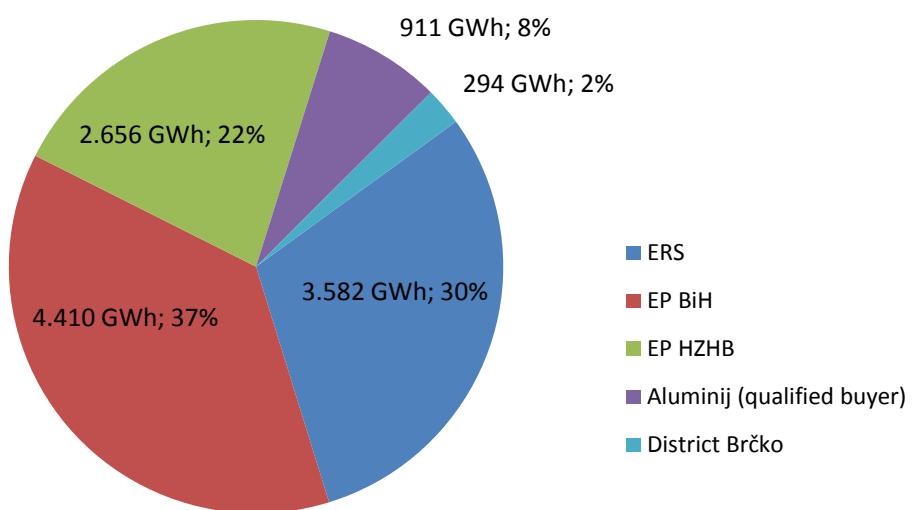

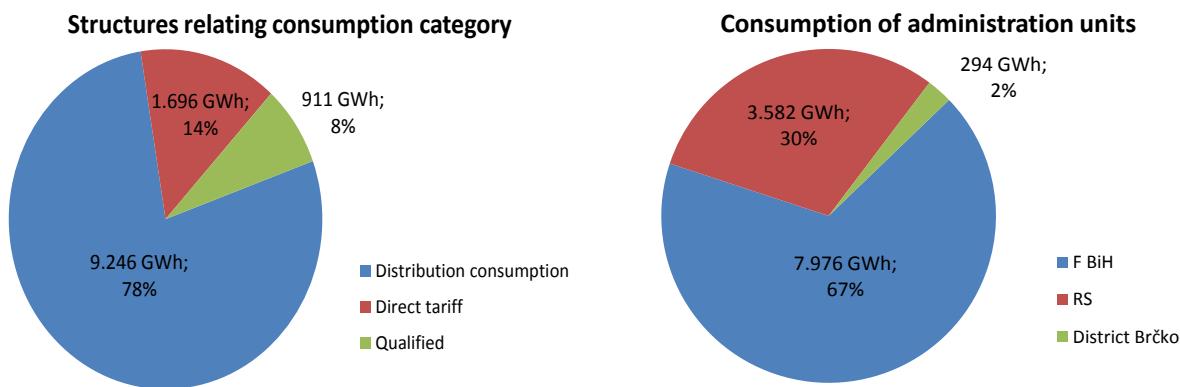

Electricity consumption in the transmission system

Electricity consumption in the transmission system in BiH in 2012 was 11.853 GWh and it is 0,2% smaller in comparison to 2011. Additionally, in 2012 PSHPP Čapljina took over 66 GWh of electricity from the transmission system. Distribution companies took over 9.246 GWh from the transmission system and directly connected buyers took 2.607 GWh of electricity. Out of that amount, Aluminij, as a qualified buyer, took over 911 GWh which made 7,7 % of total electricity consumption in the transmission system in BiH.

The following diagrams show licensed companies' consumption and the structure of consumption regarding the consumption categories and administration units in BiH.

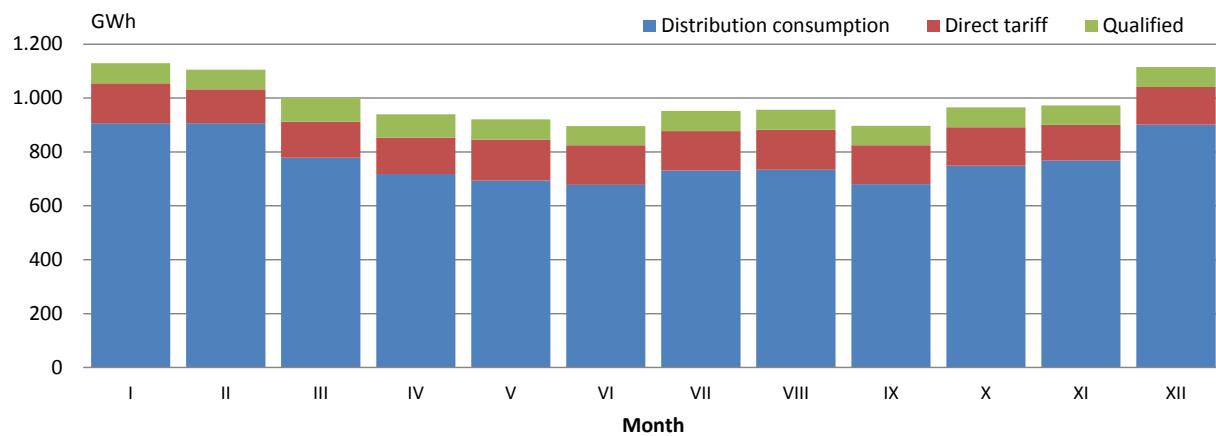

Consumption of electricity in BiH transmission system in 2012

The highest monthly consumption in the transmission system in BiH was in January and it was 1.129 GWh. The smallest monthly consumption was in June and it was 897 GWh. The following diagram shows monthly electricity consumption in the transmission system in BiH.

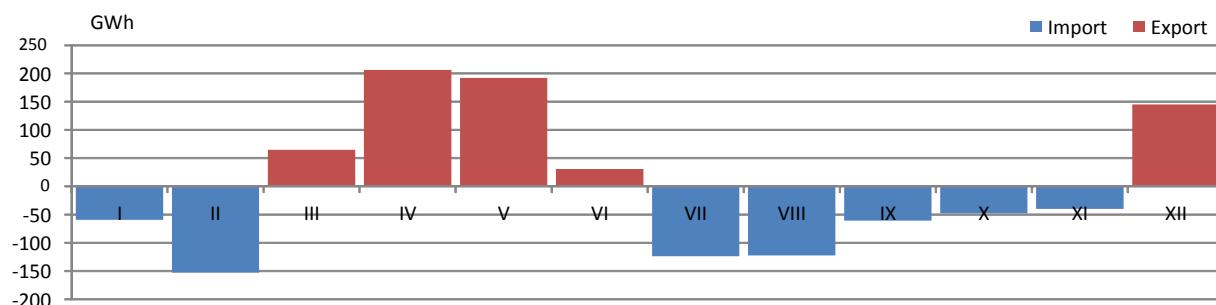

The structure of electricity consumption through the months in 2012

Declared power exchange with the neighbouring systems

According to nominated exchange programmes 3.653 GWh of electricity was imported in BiH power system in 2012, and 3.686 GWh of electricity was exported from the power system of BiH. Out of that amount, in 2012, 2.111 GWh were transmitted over BiH transmission network. Balance out of 33 GWh of exported electricity makes 2,2% in relation to electricity exported in 2011.

Balance of scheduled exchange in BiH in 2012

Crossborder power flows

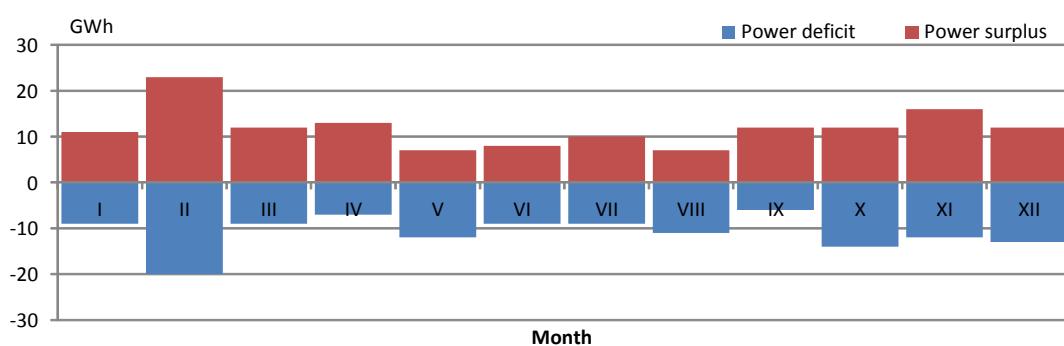

Realized physical power flows over interconnection tie-lines in 2012 provide balance of exchanged power of BiH Control Area in amount of 44 GWh in the direction of export. From the neighbouring power systems 4.481 GWh were imported in BiH system and in other systems 4.525 GWh of electricity were exported. Relating the power flows at the borders with neighbouring systems in 2012, 1.222 GWh were imported at the border with Serbia, 581 GWh were imported at the border with Croatia and 1.846 GWh were exported at the border with Montenegro.

Deviations from the nominated exchanges programmes

Unintentional deviations from the scheduled programmes in 2012 totally amounted to 132 GWh for the hours for which the deficit was registered i.e. total 145 GWh for the hours when there was electricity surplus registered in BiH Control area. Maximum hourly electricity deficit in amount of 325 MWh/h was registered in October and electricity surplus of 266 MWh/h in February 2012.

Monthly deviation of BiH power system

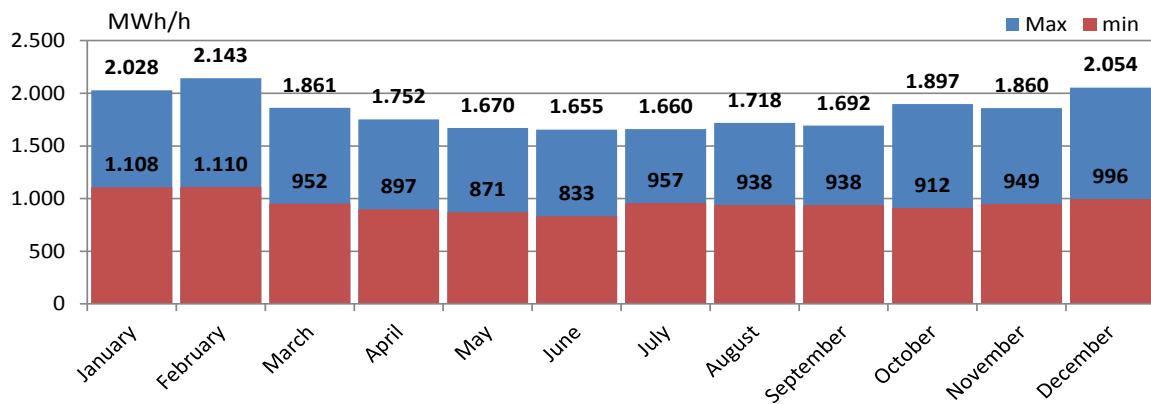

Specific values of hourly and daily consumption

Maximum hourly consumption in 2012 was realized on February 10th, 2012 in amount of 2.143 MWh/h and in the 18th hour and is somewhat smaller in relation to the previous year. Maximum daily consumption was also realized on February 10th in amount of 44.044 MWh of electricity. Minimum hourly consumption is registered on June 3rd, 2012 in the 5th hour in amount of 833 MW and minimum daily consumption in amount of 26.879 MWh of electricity was registered on May 1st, 2012 (Labour Day).

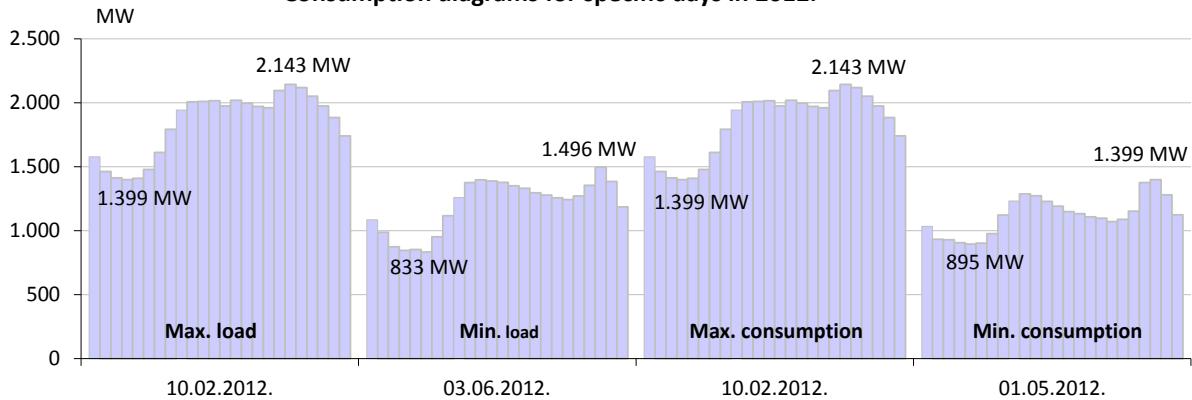

Specific electricity consumption in 2012

<i>Max. hourly consumption</i>			<i>Min. hourly consumption</i>			<i>Max. daily consumption</i>			<i>Min. daily consumption</i>
